

IESTI01 – TinyML

Embedded Machine Learning

3. TinyML Challenges: - Embedded Systems

Prof. Marcelo Rovai

UNIFEI

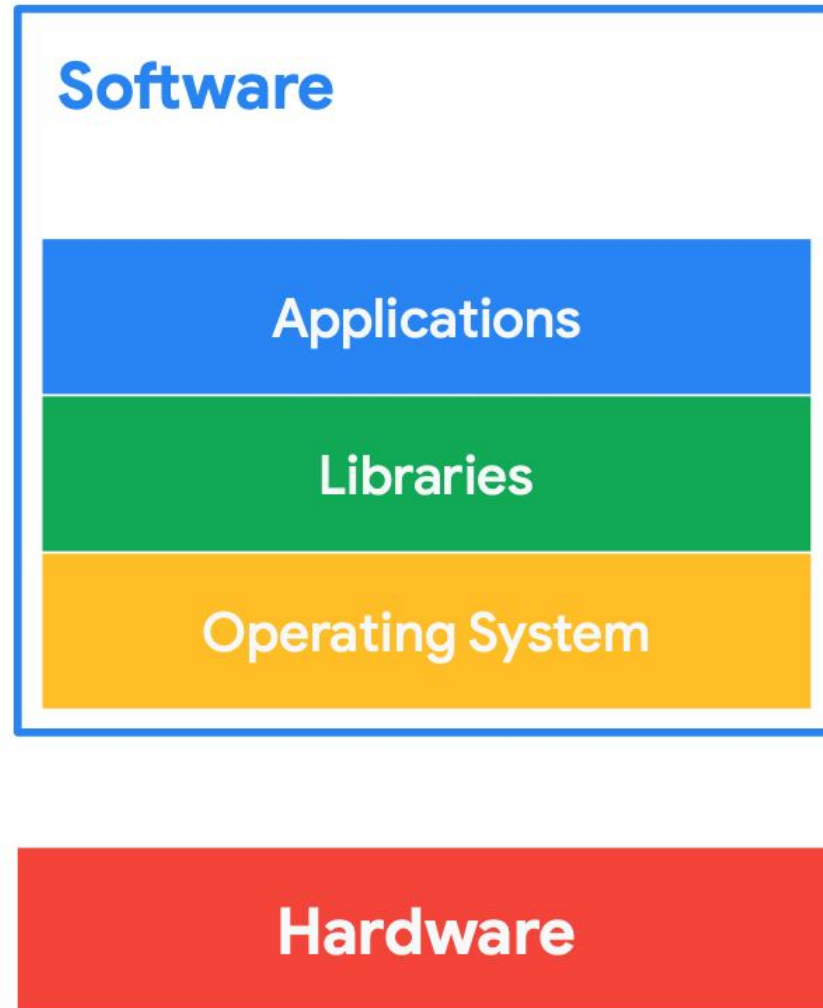

What are the Challenges for TinyML?

TinyML

Computer System

Software

Applications

Libraries

Operating System

Hardware

Building Blocks of Computing Hardware

Hardware

Software

Compute

Memory

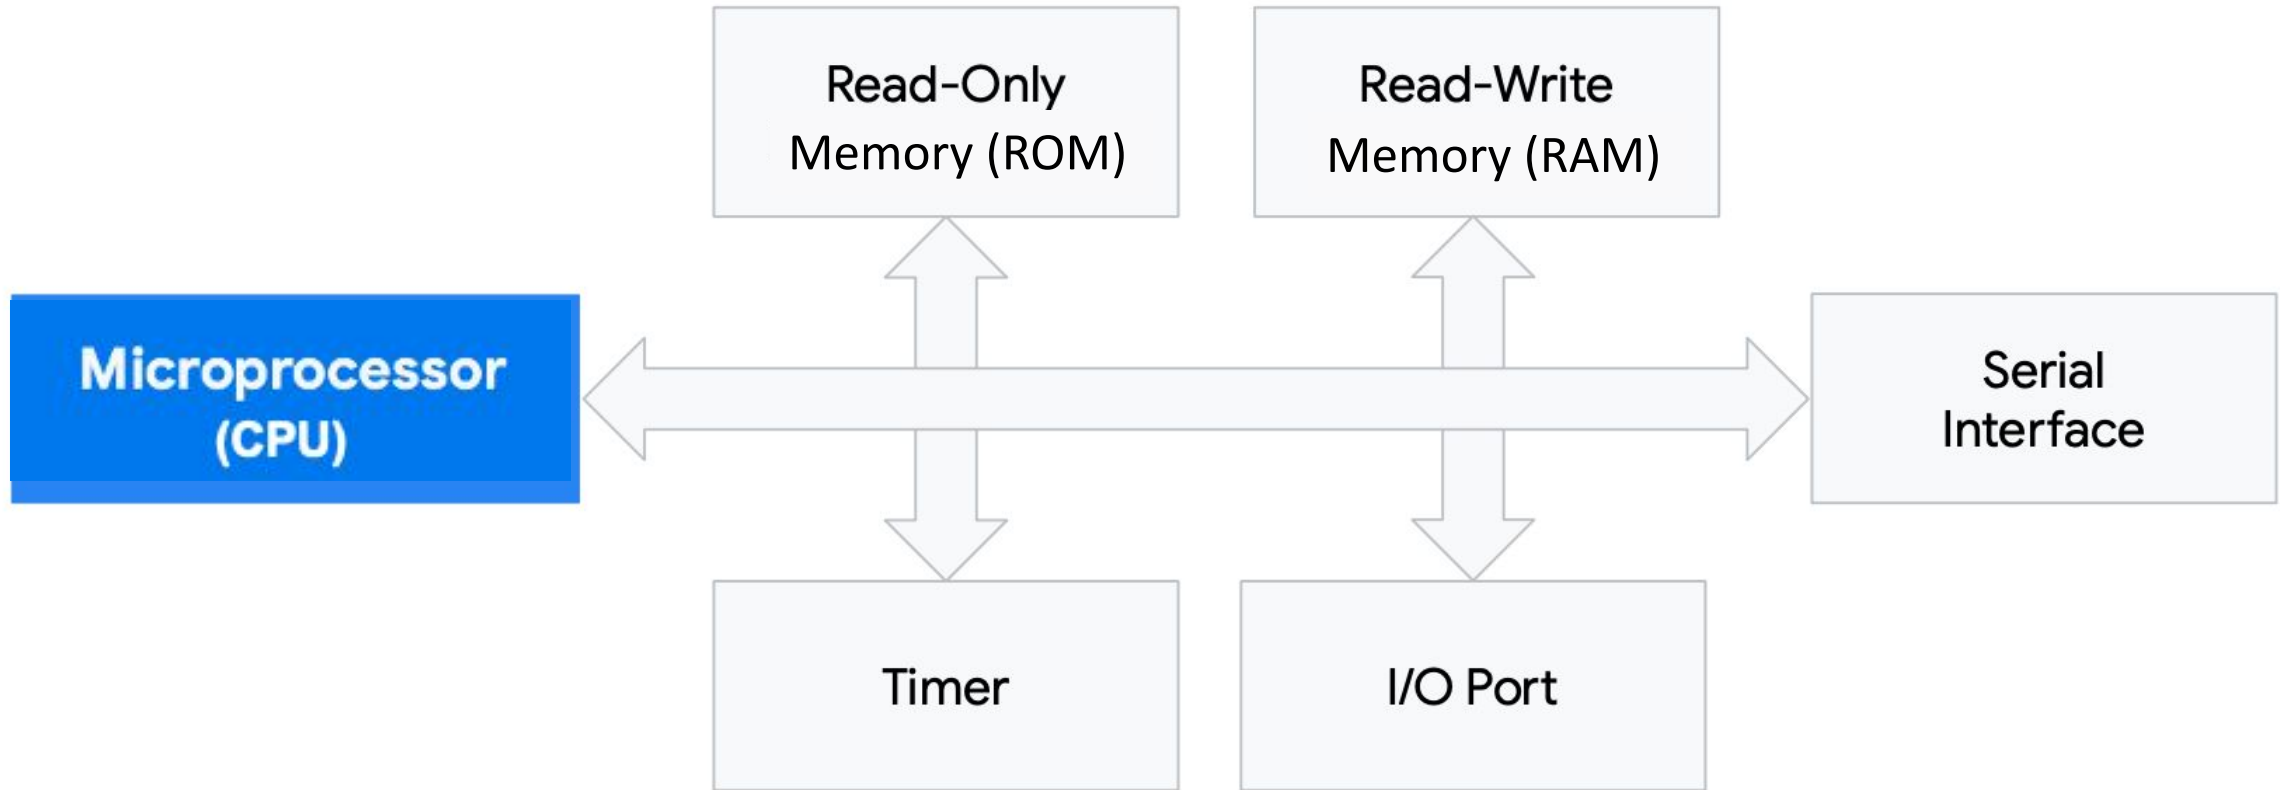

Storage

Microprocessor v. Microcontroller

Microprocessor: only **one part** of the puzzle

Microcontroller

CPU	Read-Only Memory (ROM)	Read-Write Memory
Timer	I/O Port	Serial Interface

Microcontroller: a **complete package**

Microprocessor (CPU)

- Heart of a **computer system**
- Just the processor, memory and storage are **external**
- Mainly used in **general purpose systems** like laptops, desktops and servers
- **Offers flexibility** in design
- System size is **big**

Microcontroller

- Heart of an **embedded system**
- Memory and storage are all **internal** to the system
- Mainly used in **specialized, fixed function systems** like phones, MP3 players, etc.
- **Limited flexibility** in design
- System size is **tiny**

Orders of Magnitude Difference

	Microprocessor	>	Microcontroller	
Platform				Nano
Compute	1GHz–4GHz	~10X	1MHz–400MHz	64MHz
Memory	512MB–64GB	~10000X	2KB–512KB	256KB
Storage	64GB–4TB	~100000X	32KB–2MB	1MB
Power	30W–100W	~1000X	150μW–23.5mW	

Implications

- How complicated is the running task?
- How much memory does it need to have?
- How long does the job have to perform?

Microcontroller

1MHz-400MHz

2KB - 512KB

32KB - 2MB

150 μ W-23.5mW

Hardware

Anomaly Detection
Sensor Classification
20 KB

KeyWord Spotting
Audio Classification
50 KB

Image
Classification
250 KB+

Rpi-Pico
(Cortex-M0+)

Arduino Nano
(Cortex-M4)

Arduino Pro
(Cortex-M7)

EdgeML

Object Detection
Complex Voice
Processing
1 MB+

Video
Classification
2 MB+

RaspberryPi
(Cortex-A)

SmartPhone
(Cortex-A)

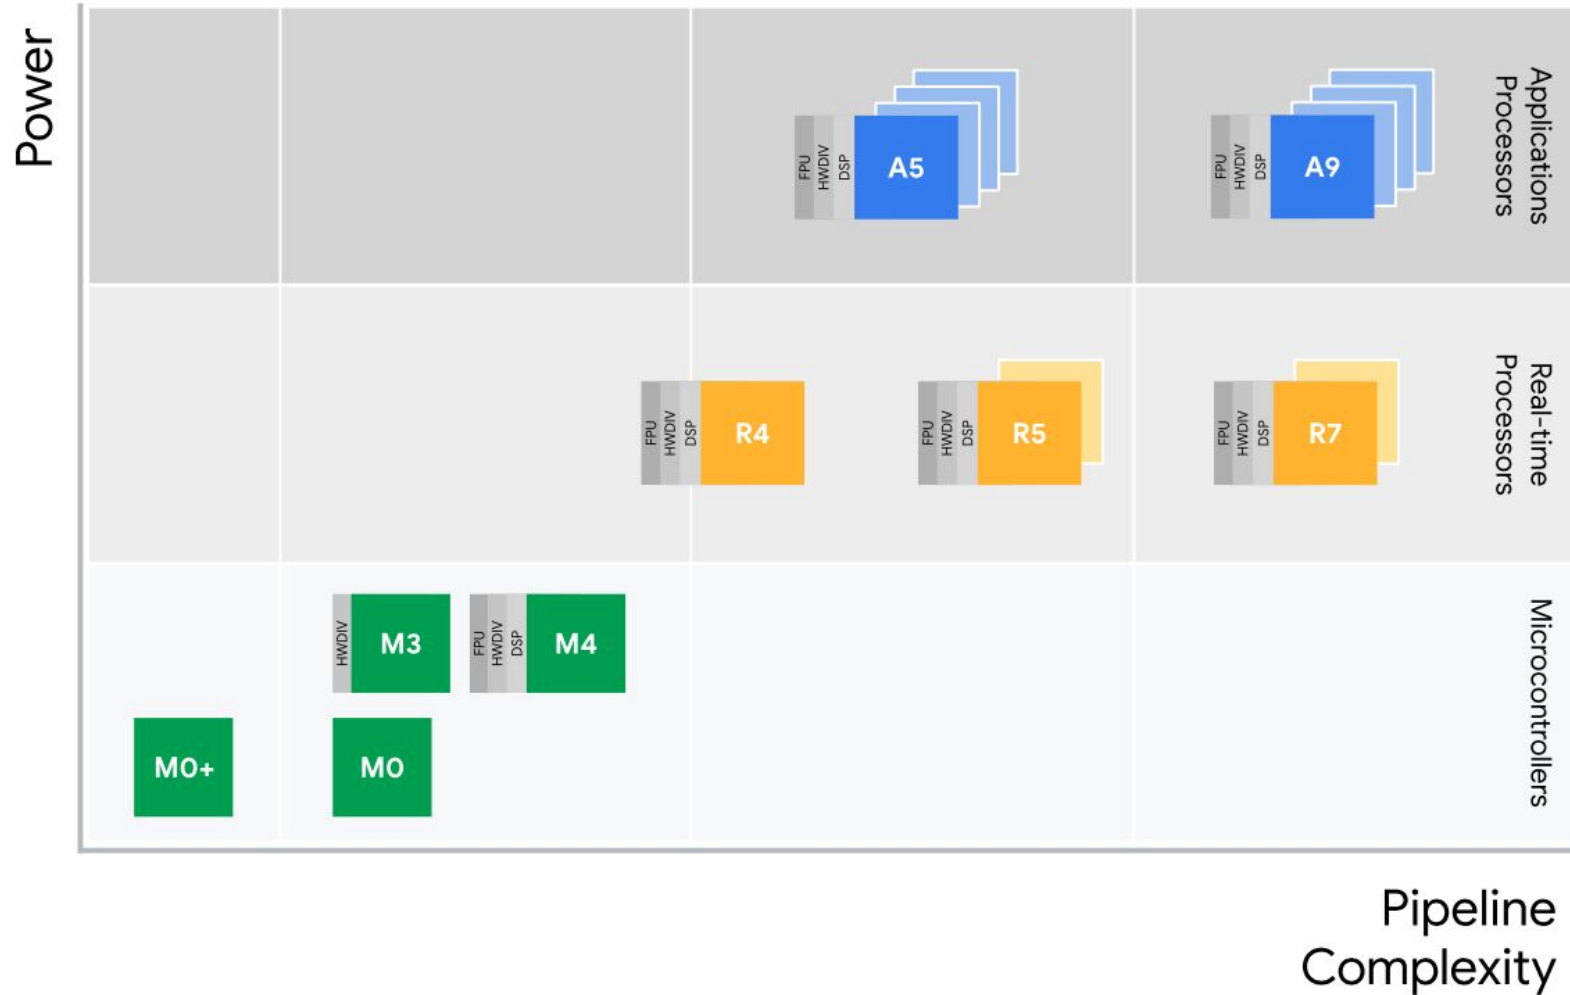

Jetson Nano
(Cortex-A + GPU)

Computing Hardware

	Raspberry Pico	Arduino Nano Sense	ESP 32	Seeed Wio Terminal	Arduino Portenta
32Bits CPU	Dual-core Arm Cortex-M0+	Arm Cortex-M4F	Xtensa LX6 Dual Core	Arm Cortex-M4F	Dual Core Arm Cortex M7/M4
CLOCK	133MHz	64MHz	240MHz	120MHz	480/240MHz
RAM	264KB	256KB	520KB	192KB	1MB
ROM	2MB	1MB	2MB	4MB	2MB
Radio	---	BLE	BLE/WiFi	BLE/WiFi	BLE/WiFi
Sensors	No	Yes	No	Yes	No

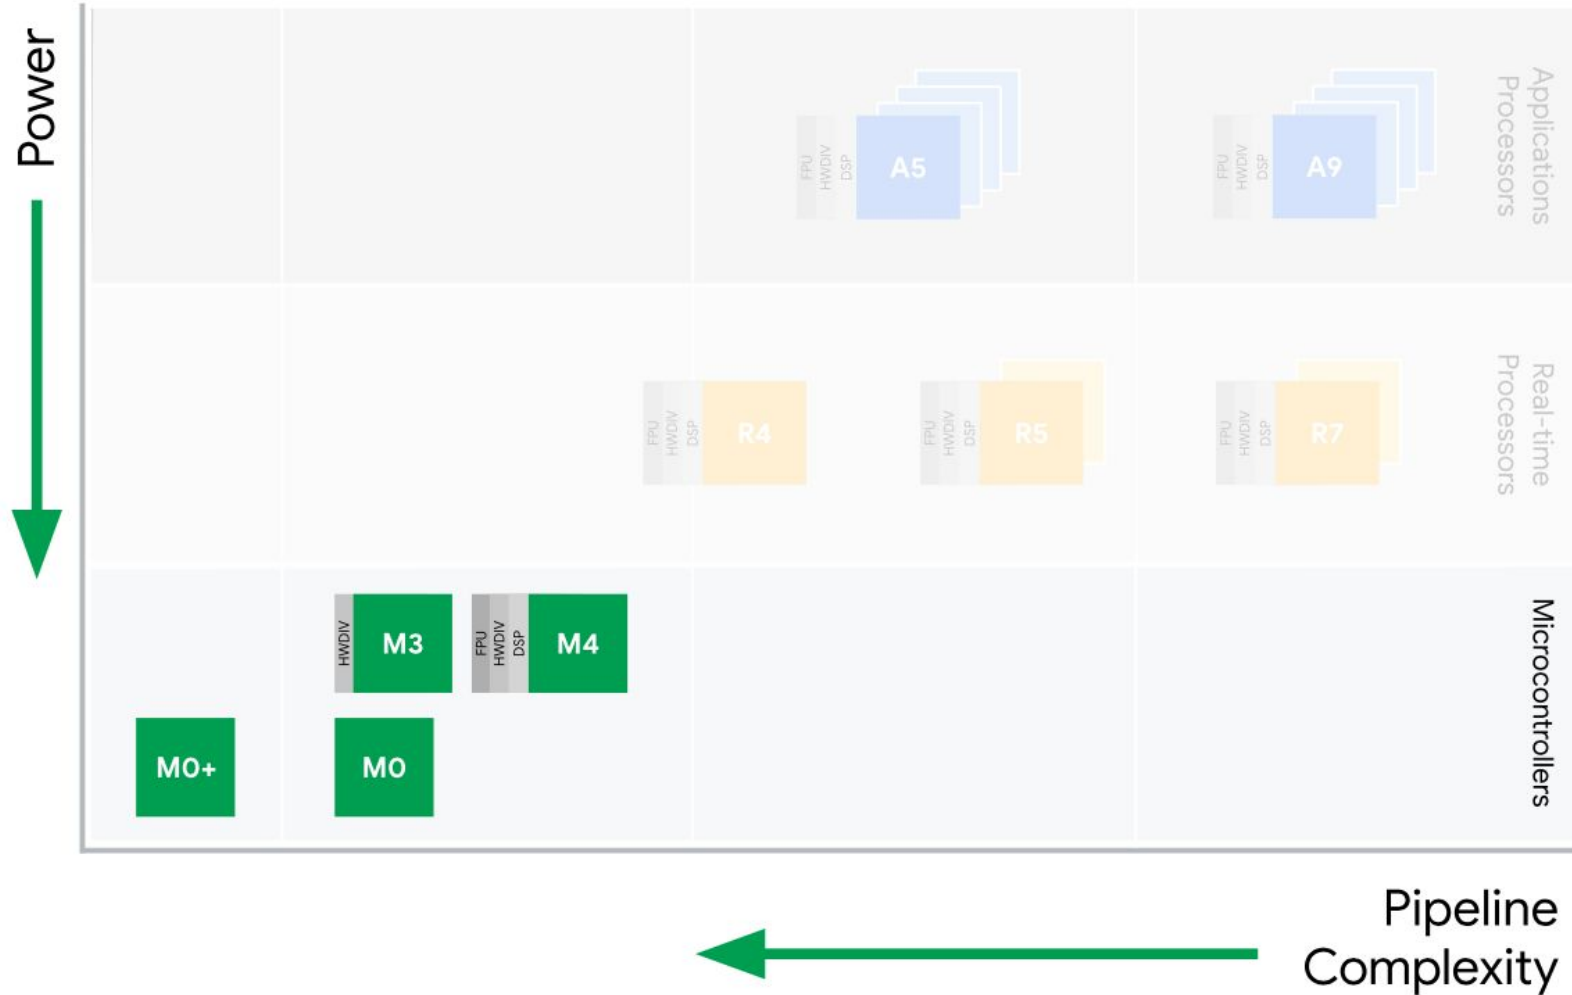

ARM Cortex Processor Profiles

Operating System

Hardware

Hardware

Software

Software

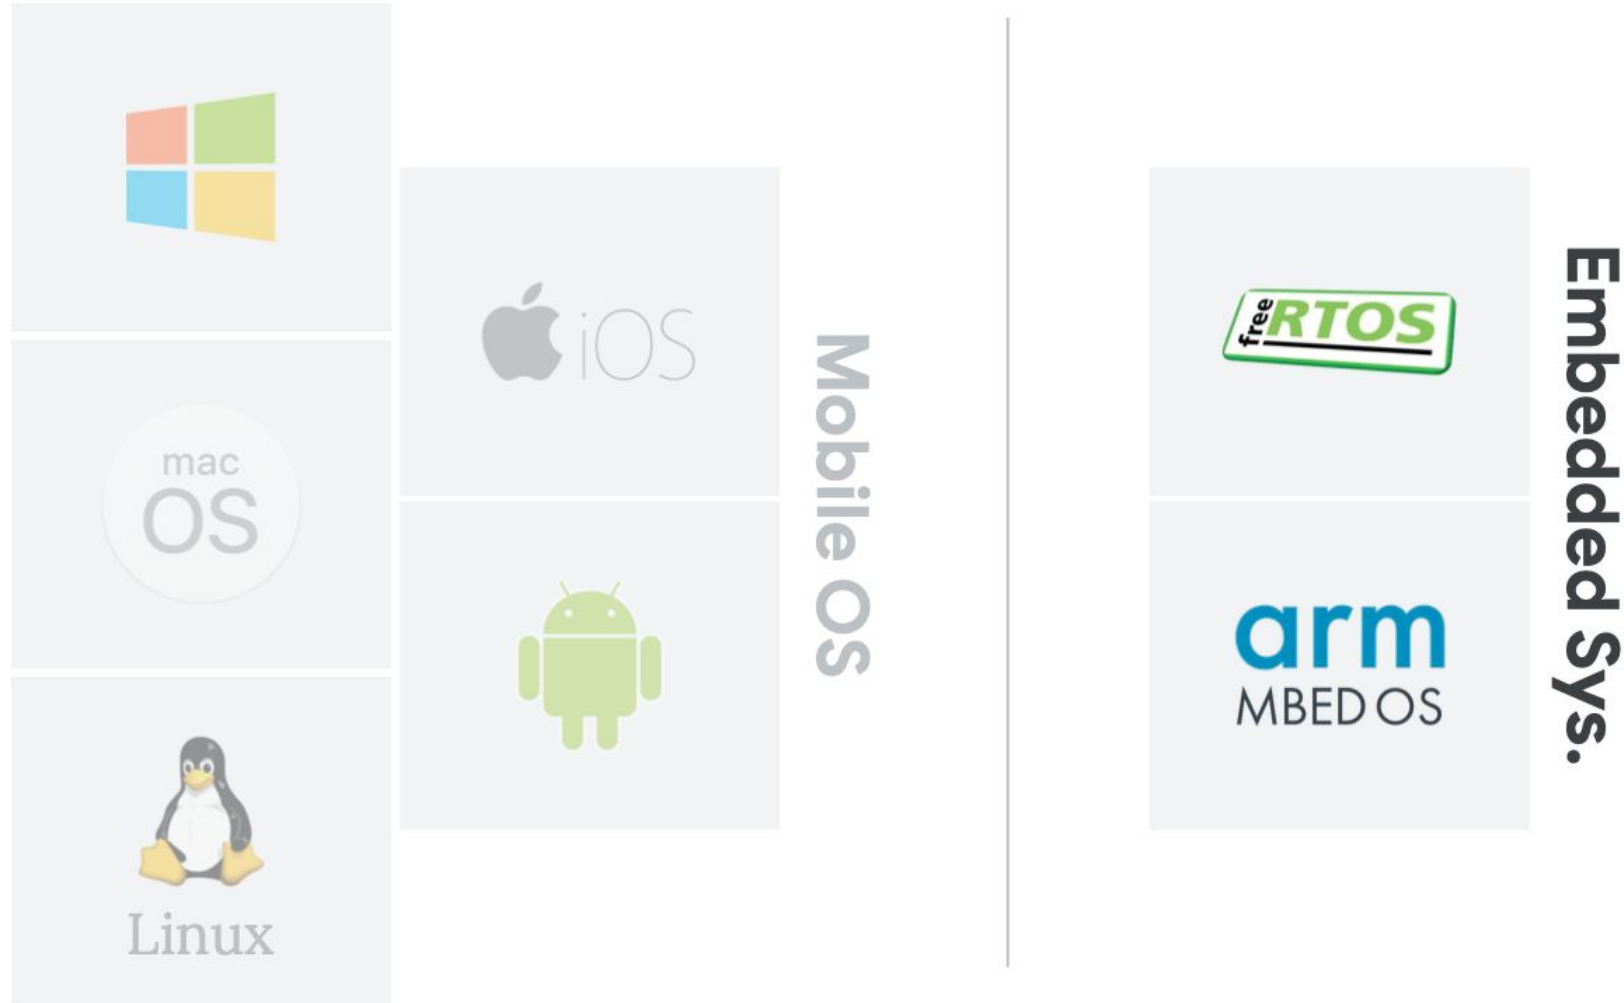

Applications

Libraries

Operating System

Hardware

Widely Used Operating Systems

Software

```
graph TD; subgraph Software; Applications; Libraries; OS[Operating System]; end; Hardware;
```

Applications

Libraries

Operating System

Hardware

```
import numpy as np
```

```
for x in range(10):  
    np.SaveTheWorld()
```

Portability Opportunity

Able to execute the same code on different microprocessor hardware and architectures.

Portability Trade-offs

Option 1	Universal Code Portability/Compatibility		✓
	Cost (\$)		✗
	Power Consumption (W)		✗
	Engineering Effort		✗
Option 2	Lower Code Portability		✗
	Cost (\$)	✓	
	Power (W)	✓	
	Eng. Effort	✓	

Portability Trade-offs

Option 1	Universal Code Portability/Compatibility		✓
	Cost (\$)		✗
	Power Consumption (W)		✗
	Engineering Effort		✗
Option 2	Lower Code Portability		✗
	Cost (\$)	✓	
	Power (W)	✓	
	Eng. Effort	✓	

Portability Trade-offs

Sacrifice portability across systems for efficiency in system performance and power efficiency

Specific HW Implementation of a Library

Option 2

Lower Code Portability

Cost (\$)

Power (W)

Eng. Effort

Summary

- **Embedded hardware** is extremely limited in performance, power consumption and storage
- **Embedded software** is not as portable and flexible as mainstream computing

Reading Material

Main references

- [Harvard School of Engineering and Applied Sciences - CS249r: Tiny Machine Learning](#)
- [Professional Certificate in Tiny Machine Learning \(TinyML\) – edX/Harvard](#)
- [Introduction to Embedded Machine Learning - Coursera/Edge Impulse](#)
- [Computer Vision with Embedded Machine Learning - Coursera/Edge Impulse](#)
- Fundamentals textbook: [“Deep Learning with Python” by François Chollet](#)
- Applications & Deploy textbook: [“TinyML” by Pete Warden, Daniel Situnayake](#)
- Deploy textbook [“TinyML Cookbook” by Gian Marco Iodice](#)

I want to thank **Shawn Hymel** and Edge Impulse, **Pete Warden** and **Laurence Moroney** from Google, Professor **Vijay Janapa Reddi** and **Brian Plancher** from Harvard, and the rest of the **TinyMLedu** team for preparing the excellent material on TinyML that is the basis of this course at UNIFEI.

The IESTI01 course is part of the **TinyML4D**, an initiative to make TinyML education available to everyone globally.

Thanks

UNIFEI
